

En route to the library, users may fuel their cars and pay from the pump, stop at an automated teller for cash, purchase stamps from a postal vending machine, or go through the self-checkout aisle at the market for a quick gallon of milk. They accomplish all these tasks quickly and efficiently within a self-service environment. It's clear that the public has become accustomed to self-service. They save time with it, and they embrace its new applications. By managing these everyday errands themselves, people are on their way quickly and efficiently, requiring little time on their part and almost no human assistance.

The SirsiDynix OneStop freestanding kiosk

SirsiDynix's new OneStop self-service station is designed to:

- Reduce staff workload by allowing users to help themselves
- Speed users through basic library processes without staff assistance
- Increase efficiency and user empowerment by circulating items either via barcode or by Radio Frequency Identification (RFID)
- Use compatibly with Radio Frequency (RF), Electromagnetic (EM) and RFID security systems
- Best meet your library's needs by choosing software only, the tabletop model, or freestanding kiosk configurations
- Fully customize the appearance, offer any of six languages currently available, use any graphic desired, create virtually any workflow – or use right out of the box
- Ensure a proper, but worry-free, installation, integration, and upkeep of your system through your service plan

The OneStop freestanding kiosk* and the All-In-One package each include:

- Integrated PC
 - 2.5 GHz processor, 512 MB RAM, 80 MB Hard Disk, CD
 - 15-inch touch screen display
 - Magnetic credit card swipe
- Barcode scanner and receipt printer
- OneStop self-check software

* Freestanding model also includes built-in coin and bill acceptor

Self-checkout solutions have already been welcomed by library users. So why stop this growing trend at the library door when you can offer this same option for routine library procedures? With library staff already stretched as your budget continues to shrink, it makes sense to turn to self-service. It allows you to save valuable staffing and funding resources for other, more detailed duties.

But it takes innovation to offer the increasing empowerment that users want while maintaining, or even growing, the current services they require. That's why SirsiDynix has a solution to help you continue to do more with less.

SirsiDynix is ushering in OneStop – a next-generation self-service solution. OneStop is a multipurpose station that offers library users options without directly involving library staff. With the SirsiDynix OneStop, staff members are freed of many routine procedures, while users are more satisfied by gaining further control over their library experience:

- Materials can be checked out without waits in long lines at the circulation desk, or checked in as well. What a bonus for users and staff at a bustling library!
- People can use cash, debit cards, or credit cards to easily pay library fines and fees. Just think how much more likely patrons might be to pay their account balances when they can bypass a line and do it themselves.
- Coupled with the power of EnvisionWare's printing, payment, and PC reservation products, library users will be able to perform the following activities at OneStop:
 - Pay for print jobs and release them without staff involvement
 - Debit funds from an online account to pay library fines and fees
 - Reserve a PC in the future or sign up for the next available station

The adaptability of SirsiDynix OneStop makes it compatible with either barcoded or RFID-tagged collections and patron cards. If your library currently

uses barcodes, but later upgrades, the station can be modified at any point to RFID compatibility.

And you can choose the configuration that best fits your library. While the full-service freestanding kiosk is a great fit for most libraries, space-conscious libraries may select the "All-In-One" tabletop OneStop to place on existing furniture or on the circulation desk. Software licenses can be

individually purchased for use with a library's choice of hardware. They must, however, conform to minimum hardware specifications.

The All-In-One SirsiDynix OneStop tabletop model

OneStop is superior to other self-service products on the market because it adapts to your library. With other systems, that offer only a generic design for library implementation, your library must adapt to their system.

SirsiDynix OneStop offers advantages designed to:

- Integrate perfectly with any SIP2-compatible intergrated library system, *including SirsiDynix Horizon and SirsiDynix Unicorn®*
- Adjust and adapt to the needs of your library's workflow and traffic
- Ensure seamless compatibility both now and as you upgrade your library in the future

People want to find what they need in your library and then move on. So allow your users to make just one stop with the best self-service center available: SirsiDynix OneStop.

Bringing Knowledge to Life.
